ALASKA STATISTICAL REVIEW
1982

Volume I

DIVISION OF BUDGET & MANAGEMENT
Office of the Governor

FOREWORD

This first volume of the Alaska Statistical Review 1982, updates information provided by previous editions, formerly compiled by the Alaska Department of Commerce and Economic Development. As the first of a two-book set, this publication presents statistical information concerning four main areas of interest: Social Statistics, Finance, Resources, and Transportation. A total of fifty-four tables, four graphs and two maps provide a statistical abstract of the State of Alaska.

The second volume of the Alaska Statistical Review 1982, due out shortly after this volume, provides economic information for each of the State's twenty-nine census areas. It reports data formerly compiled by the Alaska Department of Commerce and Economic Development in the publication entitled Numbers.

All footnotes for tables and graphs in this publication appear on page 55.

Introduction

This second volume of the Alaska Statistical Review 1982 updates personal income, wage and salary employment, and wage and salary earnings data previously compiled by the Alaska Department of Commerce and Economic Development in the November 1979 edition of Numbers: Basic Economic Statistics of Alaska Census Divisions.

The review presents annual data over the time period 1975-1980 for the entire state, as well as Alaska's 29 census divisions, as defined in the 1970 census. In addition, quarterly data for 1980 is presented.

The format followed in this publication presents: (1) an explanation of data, (2) personal income, wage and salary employment, and wage and salary earnings data for Alaska, and (3) personal income, wage and salary employment, and wage and salary earnings data for each of the 29 census divisions. The section entitled "Explanation of Data" contains a description of the uniform data set for Alaska and each census division, the technical definitions and limitations of data categories, and citations of data sources. It is advised that users of Volume II read the "Explanation of Data" before referring to the data presented.

Explanation of Data

A uniform data set is used throughout the second volume of the Alaska Statistical Review 1982. For Alaska and each of the 29 census divisions, as defined in the 1970 census, a data set is given.

MAP - SUMMARY

The first page of each data set contains a map representing the geographical area of the particular census region and a brief summary of the demographic, economic, and climatological characteristics of this region.

Data Sources:

Map

1. Alaska Department of Labor, Alaska Population Overview 1981, "1970 and 1980 Population by the 1970 Census Divisions, State of Alaska," Table 11.10.
2. U.S. Department of Commerce, Bureau of Economic Analysis, "Personal Income by Major Sources, Alaska 1975-80," computer print-out, Table 5.00, April 1982.

PERSONAL INCOME BY MAJOR SOURCES, 1975-1980

The second page of each data set contains personal income statistics for each particular census region. Under the major category of Income by Place of Residence, it should be noted that the estimates of Total Personal Income for the census divisions of the Aleutian Islands, Kodiak, Kuskokwim, Outer Ketchikan, Seward, Wade Hampton, and Yukon-Koyukuk are sufficiently different from previous estimates such that a discontinuity in the time series between 1976 and 1977 exists for total and per-capita personal income. Also, it should be noted that a subcategory, "Dividends, Interest, and Rent," which falls under "Derivation of Total Personal Income," includes the capital consumption adjustment for rental income of persons. Finally, "Proprietor's Income and Non-Farm Proprietor's Income," which fall under the major category of "Earnings by Place of Work - Components," include the capital consumption adjustment for non-farm proprietors. Allowances should be made for rounding.

WAGE AND SALARY EMPLOYMENT, BY INDUSTRY

The third page of each data set contains a compilation and condensation of the latest quarterly wage and salary employment data by census region released by the Alaska Department of Labor (ADOL), earlier quarterly data released by the ADOL, and employment data released by federal agencies. The following should be noted:

1. Self-employed persons, unpaid family help, and domestics are not included in the employment estimates.
2. The monthly number of employees is a job count over a pay period including the 12th of each month. Some workers may be reported by more than one employer due to multiple job-holding and labor turnover. Hence, quarterly and annual tabulations represent a job count, rather than the number of persons employed.
3. The category "Miscellaneous, Nonclassified" includes employment which cannot be classified in any other category and employment in the "Agriculture, Forestry, and Fishing" category in the instances in which the "Agriculture, Forestry, and Fishing" category is unlisted.
4. The main sources of the ADOL nonagricultural employment data are the quarterly contribution reports made by employers subject to the Alaska unemployment insurance law and the quarterly reports made by federal agencies subject to the State-administered program for unemployed federal workers.

An employer of one or more wage or salary-earning employees is subject to the Alaska Employment Security Act unless specifically exempted by federal law. In accordance with a confidentiality provision in the Alaska Employment Security Act, if within a particular category there are fewer than three reporting employers in a census division, or if one employer has more than 80 percent of the employment for a particular category in a census division, then the ADOL will not disclose the employment for that particular category in its publications.

When only one category is an undisclosable category, the employment estimate from a disclosable category (often the "Miscellaneous" category in the ADOL-produced Statistical Quarterly) will also not be revealed by the ADOL. This is done to prevent the disclosure of employment data for a particular undisclosable industry by Statistical Quarterly users through the subtraction of the disclosed category employment estimates from the total. The practice is not implemented when there are two or more categories which are not disclosable.

In Volume II of the Alaska Statistical Review 1982, the "Nondisclosed" employment category estimate, obtained through the subtraction of the individual disclosed employment category estimates from the total nonagricultural employment category estimates, does not reveal the employment of a single undisclosable category but, rather, is the sum of the individual undisclosable employment category estimates and, as discussed above, the disclosable category estimates designated undisclosable. The letter "D" designates an undisclosed category estimate.

5. The "Farm" category, representing agricultural production employment, is valid when agricultural production employment is separated from agricultural services employment, as in the case of federal employment tabulations. However, because the Statistical Quarterly includes both agricultural production and agricultural services employment in its "Agriculture, Forestry & Fisheries" category and because the "Agriculture, Forestry, Fishing" category estimates in this volume of the Alaska Statistical Review 1982 are taken from the ADOL's "Agriculture, Forestry & Fisheries" category, the "Farm" category should be disregarded. Hence, the "Nonagricultural" major category should be understood as a total which contains both agricultural and nonagricultural employment categories. The category is used for consistency purposes.

6. Because of rounding, sums of individual employment category estimates may not equal total employment estimates.

7. Employment data is reported by place of work.

WAGE TOTALS, BY INDUSTRY

The fourth page of each data set contains a compilation and condensation of the latest quarterly payroll data by census region released by the ADOL, earlier quarterly data released by the ADOL, and payroll data released by the U.S. Department of Commerce. The following should be noted:

1. The wage and salary disbursements to self-employed persons and domestics are not included in the payroll estimates.

2. The category "Miscellaneous, Nonclassified" includes payroll data which cannot be classified in any other category and payroll data in the "Agriculture, Forestry, and Fishing" category in the instances in which the "Agriculture, Forestry, and Fishing" category is unlisted.

3. The main sources of the ADOL nonagricultural payroll data are the quarterly contribution reports made by employers subject to the Alaska unemployment insurance law and the quarterly reports made by federal agencies subject to the State-administered program for unemployed federal workers.

The confidentiality practices as discussed in the previous section on employment data are also in effect for the release of payroll data by the ADOL. If within a particular category there are fewer than three reporting employers in a census division, or if one employer has more than 80 percent of the employment for the particular category in a census division, then the aforementioned disclosure practices in effect for the employment data also go into effect for the payroll data. The letter "D" designates an undisclosed category estimate.

4. The "Farm" category, representing agricultural production payroll, is valid when agricultural production payroll is separated from agricultural services payroll, as in the case of federal payroll tabulations. However, because the Statistical Quarterly includes both agricultural production and agricultural services payroll data in its "Agriculture, Forestry & Fisheries" category and because the "Agriculture, Forestry, Fishing" category estimates in this volume of the Alaska Statistical Review 1982 are taken from the ADOL's "Agriculture, Forestry & Fisheries" category, the "Farm" category should be disregarded. Hence, the "Nonagricultural" major category should be understood as a total which contains both agricultural and nonagricultural payroll categories. The category is used for consistency purposes.
5. Because of rounding, sums of individual payroll category estimates may not equal total payroll estimates.
6. Payroll data is reported by place of work.

Alaska had a 1980 per-capita income level of $12,118 giving it a rank of first among the 50 states. With a 1975 per-capita income level of $9,229 the annual per-capita income growth rate over the period 1975-1980 was 5.6%.

Alaska's annual population growth rate over the period 1970-1980 was 3.1%, which reflects a 1970 population of 309,000 and a 1980 population of 420,000.

Commercial activities within Alaska include mining, oil, and gas extraction, contract construction, fishing and fish processing, and transportation and public utilities.
